

PROGRAM VISION

Current State -----> Desired Final State				
States	State 0	State 1 (Interim State)	State 2 (Interim State)	State 3
Headline	No Analytical Readiness	Data Discovery & Exploration	Analytical Understanding & Relationships	Analysis Performed
Fact / Objective	Data is unavailable, inaccessible, or unusable for analysis. No clear understanding of what data exists or where it lives	Data is identified, collected, and explored to understand structure and quality	Analytical behaviors are applied to understand relationships and drivers Focus on who affects what and how variables interact	Analysis is complete, trusted, and decision-ready
Key Characteristics	Data silos or missing data No analytical baselines Decisions driven by intuition	Data sources connected Initial EDA (Exploratory Data Analysis) performed Basic understanding of distributions, gaps, anomalies	Correlations and dependencies identified Feature importance understood Hypotheses formed and tested	Insights are explainable and actionable Results are consumable by business users Foundation ready for automation or AI-driven intelligence
Outputs	Problem statements framed (what we want to analyze) Initial data inventory requirements identified	Cleaned and consolidated datasets EDA insights (patterns, outliers, data quality issues) Data readiness assessment	Identified key drivers and influencing factors Validated analytical hypotheses Interpretable relationships and causal insights	Final analytical insights and conclusions Decision recommendations backed by analysis Reusable analytical framework / models

Program Vision – State-Based Progression

Dimension	State 1 – Data Exploration (EDA)	State 2 – Analytical Build & Testing (MVP)	State 3 – Packaged, Decision-Ready Intelligence (DFS)
State Intent	Understand data availability, quality, and structure	Build, validate, and test analytical logic	Deliver consumable, trusted insights for decisions
Fact / Objective	Data is identified and explored to assess readiness	Analytical models/logic are built and rigorously tested	Analysis is finalized, packaged, and ready for business use
Primary Focus	<i>What data exists and how reliable is it?</i>	<i>What affects outcomes, and does the analysis hold under testing?</i>	<i>How can insights be consumed, trusted, and acted upon?</i>
Key Activities	• Data sourcing & consolidation • EDA (patterns, gaps, anomalies) • Data quality assessments	• Feature engineering • Relationship & driver analysis • Hypothesis testing • Model/MVP build • Validation & robustness testing	• Insight summarization • Narrative creation • UI / dashboard design • Business alignment & sign-off
Key Characteristics	• Descriptive understanding of data • Issues and limitations surfaced • No decision logic yet	• Drivers and dependencies validated • Models tested for accuracy & stability • Analytical confidence established	• Explainable and transparent outputs • Business-ready presentation • Governed and reusable
Nature of Insights	Descriptive	Diagnostic & validated	Prescriptive & actionable
Outputs	• Cleaned & consolidated datasets • EDA findings & data readiness report	• Identified and tested key drivers • Validated hypotheses • Tested MVP models / analytical logic	• Final insights & recommendations • Packaged outputs (UI, dashboards, reports) • Reusable analytical framework/models
